- ▶ All products are designed in cooperation with health and **fitness experts**

Places that bring happiness

FITNESS EQUIPMENT

Everyday training for everyone. All ages and sizes: men, women, moms, teenagers, seniors, you name it.
And all they need is just the weight of their own body.

XC SERIES
ALL-METAL DESIGN

Cost-effective choice wherever people live. Great performance at a good price.

CE SERIES
STAINLESS STEEL DESIGN

Exclusive design and long-term investment. If you're looking for resilience, here it is.

SBI 201
STAINLESS STEEL DESIGN

Wherever you place it. Recharge your batteries with us! Not just your body batteries!

PARKOUR

These areas are created primarily for teenagers, starting from 8 years of age. Our Parkour playgrounds meet European standards and were designed in cooperation with well-known Czech parkour practitioners.

CHILDREN'S WORKOUT

Children are our future, so they should be educated and motivated to a healthy lifestyle as early as possible. We are happy to introduce you our children's workout sets.

STREET WORKOUT

The symbol of a healthy lifestyle and the returning of people to public space. Thanks to the patented modular system, you can expand our sets endlessly.

WO SERIES
ALL-METAL DESIGN

No mechanical parts, high resistance and great price to performance ratio.

WOS SERIES
STAINLESS STEEL DESIGN

Literally indestructible sets in an exclusive design for intense use.

SOLAR

Functional solar furniture that you must have. Functional equipment on which you can charge not only mobile devices.

Dear readers,

Colmex has been here for you for 13 years and it is not only thanks to you that our team has managed to complete over 3000 projects in 33 countries all over the world. The quality of honest work of Czech employees, services, products, social and environmental responsibility is obviously a positive evaluation criteria when choosing a reputable business partner.

We know that the cost of energy is a big topic for you at the moment, so in this newsletter, in addition to our standard range, you will also find our solar furniture, which we supply worldwide. As we say "We recharge your batteries, not just your body batteries".

By the way, did you know that our solar bench is actually a small solar power

plant? A solar desk that you can use as an outdoor office is already much bigger and a photovoltaic gazebo, as a variant of your rooftop photovoltaic power plant, so that you don't have to interfere with existing roofs and can use the gazebo for other purposes, can be used anywhere?

You will certainly be equally interested in the offer of SORIAN, our sister company, which specialises in photovoltaics in the public sector. All versions and combinations, but one in particular.

And if you are already using solar energy to the full, we can build you a new outdoor gym or playground. There you will get the energy you need for new ideas! And we will take care of everything else. With pleasure.

Vladimír Havlík

COLMEX

We build places that bring joy, health and energy

In 2010, COLMEX tested what a few publicly accessible fitness machines would do in the middle of a park. They expected shyness - after all, who would want to exercise in front of passers-by? But it soon became clear that this is exactly what was missing outside.

Not everyone is built for lifting weights in the gym, and time is a scarce commodity these days. Anyone can drop into the outdoor fitness park at any time and do a few exercises for health with their own body weight - mothers with children, teenagers, athletes and seniors. In short, everyone. Because a healthy body needs movement. Not to mention a healthy mind.

After the first timid moves, outdoor gyms became a phenomenon, a new trend. It soon became clear that this is exactly what was missing outside. And not just for the elderly.

Although it is not obvious at first glance, it is about protecting public health. Thanks to a huge number of completed projects and the expansion of the range of products, the company is succeeding in preventing obesity, cardiovascular diseases and other civilizational diseases associated with minimal exercise in society. In cooperation with COLMEX, cities and municipalities provide people with a space to build fitness and release endorphins associated with joy, space for enjoyment and meaningful use of leisure time.

Fitness machines primarily provide prevention, giving people the opportu-

nity to naturally stimulate the muscles of all parts of the body. Weight machines create a space for more experienced athletes to increase their fitness in the open air in exchange for indoor gyms. For strength training and bodyweight exercises, trendy workout sets are popular. Last but not least, the combination of all elements appropriately complements training and building physique across age categories. For example, Únanov near Znojmo is proud of such a complex playground. The former landfill has been replaced by a unique sports centre where satisfied enthusiasts from a wide area gather. Similarly, the leisure area in Břasy, where a parkour set stands next to the street workout area, was built by reclaiming the former brownfield after Ultramarina. Under the unique factory chimney, lovers of inline skating, disc golf and pumptrack will also find something to enjoy.

„We have been a market leader in the construction of outdoor gyms for 13 years. We respond to current events and people's needs. In the Covid era, we entered the market with outdoor stainless steel disinfection racks. At the same time, we expanded our portfolio to include outdoor weight machines to replace the gyms that were closed at the time. The company's strategy is to systematically and in

the long term supplement the needs of public space with regard to technological possibilities and trends. Our long-term strategy is to bring modern, up-to-date furnishings to towns and cities. We strive after expanding our portfolio in a meaningful way to complement the current playgrounds with new trends and real needs", summarizes Markéta Havlíková, the company's marketing manager.

Now, after 13 years in the market with 3000 outdoor gyms in 33 countries, the company is bringing new energy not only to the world of outdoor gyms. Solar benches for every playground and park. "It's not just a trend, but a necessary and functional piece of furniture - the right direction to go with the times. Free energy for everyone", says Markéta Havlíková.

"Introducing modern and functional furniture into public spaces is a necessity in these times of energy uncertainty. Solar benches should be one of the things that cities and municipalities will definitely purchase. Money invested in such a smart way brings concrete savings that can be used by cities and their citizens elsewhere," concludes Markéta Havlíková.

**Recharge your batteries with us!
And not just your body batteries!**

COLMEX

Your New Sports Ground

We will sensitively set your new sports ground in the landscape or adapt it to your ideas and colors of your design. A playground in tones of green and dark grey will enhance the natural setting of the park and add natural tones to the residential areas. When building places that bring joy, we think about all generations, hobbies and sports.

From our broad portfolio, we can design a sports venue that will appeal to children and people with limited mobility, fans of bodyweight exercise, as well as weight training enthusiasts, parkour athletes and agility enthusiasts. A complex and generous sports ground with the possibility of resting can be united, for example, by the choice of suitable surface. The surface made of moulded rubber can be colour-matched to the sports ground environment.

Our Portfolio

is rich in products and materials with something for everyone! Fitpark in all-stainless steel and timeless design will tastefully decorate city districts, parks, residential areas and private residences. The all-metal design in green and dark grey gives the entire fitpark a natural look. The stainless steel with teak lining is the right choice in modern city districts and private gardens, and will tastefully enhance residences and outdoor offices. Acacia with stainless steel gets sports grounds in tune with nature. Solar furnishings or a photovoltaic gazebo ensure the energy self-sufficiency of the entire space.

We have everything in stock, so you can practice literally tomorrow.

Children are the future pillar of every society

In recent years, public space has become an increasingly important factor in the quality of life in our cities. As people spend more and more time outdoors, it is becoming necessary to cultivate public spaces to meet the demands of a modern lifestyle. Recently, the concept of creating healthy movement habits in children has been strongly focused in this direction.

Children's playgrounds are a key element in this regard. Children can play, develop their physical skills and spend

in the future. At the same time, it is especially important for children not to put emphasis only on performance and competition, but also on fun and joy of movement. Children should be encouraged to find a sport or activity that they really enjoy and that comes naturally to them. This will ensure that physical activity is enjoyable for children and will motivate them to stay active as adults.

That is why it is of the utmost importance that playgrounds help **teach and develop children's motor and cognitive skills in a fun way**. New trendy elements such as multifunctional play modules, creative zones, educational elements or vertical gardens for example can help to make children's playgrounds interesting and stimulating.

time outdoors, not at home on computers and phones. However, it is very important that playgrounds are not only a place for fun, but also a place where children learn a healthy lifestyle and adopt regular physical activity as part of their daily routine.

Children are our future, so they should be educated and motivated to a healthy lifestyle as early as possible. **Creating healthy habits in pre-school** is key to preventing adult diseases such as obesity, diabetes and heart disease. Children who learn how to be active and healthy are more likely to be physically fit and lead healthier lifestyles

Another important point is the proper design and **safety of the play elements**. They must be designed so that children can play safely and happily without anyone having to worry about injury. Safety should be ensured not only at the play elements themselves, but also in the overall playground area. The risk of falling from a height, injury from sharp objects or exposure to dangerous surfaces should be eliminated.

Certified play modules and children's workout sets from a stable company not only guarantee trouble-free use, but also safety and quality for all users, especially children. Operators can therefore be confident that their facilities meet the highest standards and that the games they offer are safe and suitable for all age groups.

If you're looking for a supplier of play modules and kits, it can be tempting to try to find the cheapest option. However, there are other factors to consider when choosing a supplier. For example, experience and expertise, reliability and quality of products and services, length of time in the industry, as well as approach to social and environmental responsibility, such as fair treatment of employees and appreciation of quality work of Czech employees.

In this respect, **COLMEX** stands out, having been a supplier of high quality equipment for bodyweight exercise, play, entertainment and sport to the public sector for over 13 years. Their children's workout is a completely new form of equipment suitable for the development of coordination, strength and flexibility, with many features and options for different age groups of children. In addition, with more than 3,000 completed projects, COLMEX has a large number of satisfied customers and experience with different types of projects and environments. So if you are looking for a product with proven quality, trust COLMEX and don't hesitate to get their children's workout for your kids.

Children's Workout

DW Series

MULTIFUNCTIONAL CHILDREN'S PLAYGROUND

- ▶ Modular kit system
- ▶ Development of coordination, flexibility and strength
- ▶ Exercise while playing for children from 3 years of age
- ▶ Immediate delivery from a verified supplier

Outdoor children's workout for children to move and play

Modern playgrounds think about the importance of developing motor skills, movement and strength. Workout is intended for children from 3 years of age, belongs to schools and kindergartens, public sports fields and playgrounds as a supplement to game sets to support children's physical activities.

Horizontal network

Coordination of movements and maintenance balance.

Vertical network

Pulling up and climbing, coordination of movements and maintaining balance.

Vertical wall

Crawling through a circular opening in the wall, pulling up and climbing over the wall.

Ladder climber

Classic option workout exercise, lifting, crawling through and under.

FOR PLAY AND MOVE

With a suitable combination of elements, you can ensure a purposeful experience for playing and exercising at the same time. Choose from our offer of 20 typical sets, or discuss others with us customized solutions. You can find all children's workout elements and game sets on our website www.colmex.cz

Weight: 32kg

That feeling when you're standing on the street with a dead phone

**A solar bench with a phone charger and Wi-Fi connection is useful.
This story is proof.**

He planned it beautifully. Three transfers - and everything looked coordinated so nicely. He would be home by 9:30. But he missed already the first bus of four. Just as he was running to the bus stop, the bus disappeared around a curve. "Damn it!" And on top of that, the phone is completely dead. He didn't even blink at him anymore. "Just perfect!" The only thing he read from the timetable was that there was one last bus leaving in an hour. But then what? What's next? Will there be anything else to follow? Without his cell phone, he was like a man without a hand. Today, instead of making his bed at home, he will have to make his bed on a bench somewhere in a corner of the country. But wait... **this particular bench...**

...could charge his phone!

Kudos to the people who thought of putting a solar bench right here - with a phone charger and even, and this was especially nice given its nearly depleted data package, free Wi-Fi. This was the best thing that could have happened at that precarious moment.

When a solar bench is installed in the right place in a town or village, it becomes a really useful feature. It charges phones and tablets - via USB slots or wirelessly by induction, so passers-by don't even need their own cable. The bench can also cover its surroundings with a Wi-Fi signal. And it can even create supplementary lighting or collect data on air quality and emissions. So how to choose a suitable place?

In principle, you can place the solar bench anywhere. It is energy self-sufficient and does not need any power lines from the ground. And even the sun's rays don't have to hit its surface every day. The solar panels are so powerful and the batteries have such a capacity that the bench will charge your phone even after five cloudy days. So it works all the time - even in winter.

It can be helpful where people stay for longer periods of time.

The bus stop that saved the unfortunate latecomer's journey home is just one possibility. The area in front of the information centre is also a perfect option. There, free Wi-Fi and the ability to charge your phone or tablet is even sort of expected these days. In Czech cities, solar benches also stand in front of schools or on

university campuses. And spaces in front of libraries, museums or galleries also make sense.

And then there are specific places where people stay for longer periods of time. And where they even need charged phones - because they help them with their exercise. In fitparks, outdoor gyms and workout fields, people often spend hours watching exercise manuals from YouTube on their phones or turning on training session timers. A lot of people listen to podcasts while they exercise - they work on their fitness and educate themselves at the same time.

That's why Colmex, which has already built over 3,000 such fitness parks and outdoor gyms in Czech towns and villages, has developed its own solar bench. But you may be thinking of a similar counter-argument as the author of this article: Can't a vandal destroy the solar bench?

Twelve years ago, Vladimír Havlík, the owner of Colmex, used to hear that people would never exercise outside on the street. And today, outdoor gyms are quite common in towns and villages and people have taken them for granted. Vladimír Havlík sees it similarly with solar benches: "We want things around us to be nice and useful. And this is the next step on our journey." In addition, the solar panel is protected by scratch-resistant tempered glass and the electronics are concealed under a stainless steel structure with IP65 to IP67 protection - so rain and snow are considered.

And how to choose a place in your town?

Solar benches in towns, villages and also in entertainment resorts, such as Lipno, are increasing. But then again, there's no need to have one in every 50 metres of a city park. It's even unnecessary. In a small village, one is quite sufficient - but it must be conveniently located. In a place where the most people - locals or tourists - will benefit from it. Here are some examples of suitable places:

- at outdoor gyms and fitness parks,
- close to bus stops and train stations,
- in front of an information centre, library, museum or any office,
- at schools or campuses,
- in a park or natural swimming pool.

The Colmex solar bench is manufactured in the Czech Republic. And it can be beneficial for you too. Start your journey at www.colmex.eu.

Smart Solar Powered Street Furniture

We move
public space

- Functional **solar furniture** that you must have
- **Charge** not only mobile devices and gadgets
- Wherever you place it
- Combination of **proven materials**
- **All-stainless steel** or all-steel powder-coated design
- **Luxury tempered glass** or polycarbonate
- Exclusive design and long term added value
- **Free energy** anywhere you place it

Meet our concept of modern solar outdoor office

SOLAR PANEL

Certified with longterm warranty

WIRELESS CHARGING

No cables needed

GLASS

Luxury tempered glass or polycarbonate

USB / USB-C

IP67 waterproof and dust protection

BATTERY

Charge not only mobile devices and gadgets

DESIGN

Exclusive design and long term added value

BENEFITS

Long life green solar energy. Everyday charging. Your energy anywhere you need. Anywhere you place it. For free, for all.

DESIGN AND MANUFACTURE

We will create design and custom-manufacture anything for you and we will adjust any of our products for you in terms of size, function or material and its colors.

SERVICES

Start with our 2D or 3D visualizations we will provide you with for free according to your and your customer's needs.

DELIVERY

Order today. We deliver tomorrow. Safety first. TÜV SÜD Certified.

COLMEXX

Photovoltaics? But what if the roof cannot withstand that much weight?

What kind of energy independence is it if a forty-year-old roof can't bear the weight of photovoltaics. Such an independence will then become more expensive. Not to mention safety. Have you thought about it this way?

Power of 9 kWp - such photovoltaics can already supply the operation of a small municipal office or kindergarten. Beautiful.

But photovoltaics with such a power will also add almost a ton of extra weight on the roof of the building. Moreover, it is often an older roof that was definitely not designed and constructed for some photovoltaics decades ago. Back then, only the weight of the snow was calculated. So the question is: "Who is going to take responsibility for installing solar panels on such an old roof?"

No, no. Sorry. We did not want to discourage you from getting the photovoltaic power plant. Not at all. On the contrary - today, energy self-sufficiency is a necessity. Especially for municipal infrastructure, which has to work no matter what happens. Actually, we just want to show you what other possibilities you get when you lower your eyes - when you stop looking only at roofs with thoughts "how (for God's sake!) can I get a static survey - when you look at the whole issue outside the established paradigm: photovoltaics = roof. So lower your eyes - and imagine a photovoltaic gazebo.

A shelter with a proper steel construction, like you know from workout fields. A structure that will not bend to any element - natural or human. A structure that can be anchored to any existing surface without much intervention and can be easily dismantled and the whole gazebo moved wherever you want within half a day.

Such a photovoltaic gazebo is suitable for those places in the city or village where there is a lot of traffic during the day - and where the generated energy is consumed straight away without being stored.

Do you want a specific example? OK. Let's try to sketch a 5 x 4 m gazebo - its ten panels give a total power of 9 kWp. This can easily mean a significant support, for example, for the operation of the energy-intensive municipal sewage treatment plant, where there is a problem with insufficient roof for classic

The photovoltaic gazebo is SORIAN. And SORIAN is a new concept of energy self-sufficiency from the Czech company COLMEX.

solar panels.

9 kWp will also light up a smaller municipal office, including monitors, scanners and kettles on the desks of all employees. And such a gazebo can also easily "feed" the day-to-day running of a kindergarten or school.

Of course, the photovoltaic gazebo won't just stand by the wastewater treatment plant, in the school garden or behind the municipal office to no purpose. You can park employees' cars or work equipment under it. You can move your business meeting under it, because good thoughts always come to you in the fresh air and it will be fine in the armchairs in the shade of the gazebo. And the kindergarten children will build a whole new world under the gazebo, where neither the drops from spring showers nor the sharp summer rays will fall.

Without a doubt you will figure out some convenient uses of it in your town or village. So go for it. The people from the Czech company COLMEX, who invented the photovoltaic gazebos, will work with you closely to find the dimensions and power that fit your ideas. Everybody knows that COLMEX has been bringing joy to public spaces with its fitness parks and workout playgrounds for 13 years and 3000 successful projects - this is the best showroom of their work. And definitely a fast work too - because the gazebo will be standing wherever you say within two days. Which is also quite a difference from the waiting times for rooftop photovoltaics, don't you think?

So think about energy independence in this new, expanded perspective. A photovoltaic gazebo is a modular system - it can stand anywhere, it can expand over time, it can have walls closed, open or half open, it can serve well in a hundred and one ways and above all it will serve well where the energy is consumed directly during the day.
